

Complete Virtual Workplace

The Workplace of the Future

Scalable - Secure - Smart

The ability to work anywhere at anytime, has never been so important.

With the cloud becoming a common factor within all organisations, Complete I.T. has launched a full cloud based offering, covering all of your IT requirements utilising Microsoft technologies and allowing your teams to work from any device, from any location, at any time.

Many organisations want scalable infrastructures as they change or grow, without high costs, whilst ensuring productivity remains high. The Complete Virtual Workplace combines the best of Microsoft's Cloud solutions and Complete I.T.'s vast experience with these technologies.

One simple per user per month cost

Built around the need to ensure your teams are productive, collaborative and time efficient, ensuring they can work from anywhere on any device, all for one monthly per head cost that is easily scalable.

The 'Complete Virtual Workplace' platform utilises Microsoft 365 and Microsoft Azure services providing a complete hosted environment for all your business requirements, allowing your team to work from any device, anywhere.

Microsoft cloud services are compliant with global and regional specific compliancy certifications such as GDPR, ISO 27001, & PCI DSS, giving you confidence that your important company data is safe and compliant.

The Complete Virtual Workplace goes a long way in helping your business achieve Cyber Essentials Plus, ensuring your partners and customers are confident that you take data security seriously.

Core Components

The platform provides all of your key business IT requirements such as email, secure file access, application hosting, along with an array of security features and end user device management facilities, for PCs and mobile devices.

End User Device Management ensures that you have control of all devices that have access to your company data; whether they're business or personally owned. In addition to this, any third-party applications that your business may use, such as Sage, Act or any application that requires a traditional server environment can be implemented into the Azure platform on any common operating system desired.

The platform supports Windows PCs, Mac's, tablets and mobile phones. If you would like to provide a hosted desktop for staff, we provide Windows 10 virtual desktops, accessible from any common device or platform.

Core components include:

- Email & Calendaring
- Personal & Shared File Hosting
- Teamwork & Communication (Teams)
- Office Applications
- Security Services
- User Management
- Device Management
- Remote Helpdesk

Remote Management & Monitoring

We manage all Microsoft security updates, updates are carried out remotely on a scheduled basis utilising our Complete Endpoint Security suite (CES).

Includes:

- Monitor the anti-virus protection of all endpoint devices.
- Track all of your IT assets.
- Carry out updates (patch management) of Windows and selected 3rd party applications.
- An advanced anti-virus agent.
- Web filter.
- Our Compliance and Security module automatically applies recommended security settings.
- Reporting, demonstrating the commitment you have made to securing your data

Additional Options include:

Application hosting:

- Published Desktops & Applications
- Hosted Telephony
- Training Platform *free of charge for up to 25 licences
