

5 Top Tips Create a Strong Password

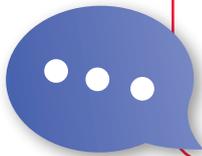

15+ characters

We recommend using a minimum of 15 characters and a combination of letters, numbers and symbols to help strengthen your password.

Don't use your pet's name

Using your pet's or family member's name followed by year of birth is not a great combo. Cyber criminals can hack accounts with simple passwords in a matter of minutes.

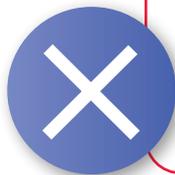

Use a password manager

If remembering your password feels like an impossible task, you can use a password manager to help you manage your complex (but strong) passwords.

Don't use the same password twice

Even if it's a strong password, using the same password across multiple accounts is a rookie mistake. If a hacker gains access to one account, then they could also access other accounts with the same password.

Enable 2FA (and MFA!)

Two factor authentication (2FA) is a much needed layer of protection for all of your logins. We recommend that you enable 2FA on all of your accounts to help keep your data secure.
